

Week 6

Dashboard Report – Healthcare Data Analysis

Name: Arni G

BSC DS & AI

Overview

The dashboard provides a comprehensive and interactive visualization of healthcare data, focusing on patient demographics, admission details, and billing information. It enables users to explore key metrics and gain insights through dynamic filters and visuals.

Key Performance Indicators (KPIs)

The dashboard displays important metrics using card visuals:

- **Total Patients:** 55K
- **Average Billing Amount:** 25.54K
- **Total Billing Amount:** 1.42 Billion
- **Average Length of Stay:** 15.51 days

These KPIs provide a quick summary of overall performance.

Visualizations Used

Patients by Age Group

- Donut chart showing distribution of patients across age categories
- Helps identify majority age group (Adult & Senior)

Total Patients and Billing Amount by Year

- Line chart representing trends over time

- Useful for analyzing yearly growth or decline
-

Readmission Rate by Medical Condition

- Bar chart showing readmission trends
 - Helps identify high-risk conditions
-

Total Billing Amount by Insurance Provider

- Bar chart comparing different providers
 - Shows which provider contributes most to billing
-

Filters (Slicers)

The dashboard includes interactive filters:

- **Insurance Provider**
- **Admission Type** (Emergency, Urgent, Elective)
- **Date of Admission**

These filters allow users to customize and explore data dynamically.

Insights

- Majority of patients belong to **Adult and Senior categories**
 - Billing amount varies across insurance providers
 - Average hospital stay is around **15 days**
 - Some medical conditions have higher readmission rates
-

Final Dashboard

Conclusion

The dashboard effectively presents healthcare data in a clear and interactive manner. It enables users to analyze trends, compare metrics, and make informed decisions using visual insights.
